Integrate 2N intercoms with AXIS Camera Station with no compromises

What does a fully-fledged integration offer you? Seamless, one click, integration of all our intercoms via the Axis Vapix protocol.

With the newest version of firmware for **2N intercoms (2.30)**, we offer you complete integration of all our intercoms with **AXIS Camera Station** software. 2N intercoms will now seemlessly **integrate via the Axis integration interface VAPIX.**

WHAT ARE THE ADVANTAGES
OF THE NEW INTEGRATION?

2 WAY AUDIO

The intercom can place a call to the operator in AXIS Camera Station software. But also the operator can call the IP intercom directly from ACS software. Even if a person who is standing at the entrance to the building has not rung the bell.

LICENSING

The software recognizes the 2N intercom as an Axis device. This allows you to add the intercom with **Core ACS licence** (a 2N enhanced video or Gold license is required)

QUICK ADDITION OF INTERCOMS TO THE SOFTWARE

AXIS Camera Station automatically searches for 2N IP intercoms in the network. The administrator then adds them to the system with a single click.

VIDEO FROM THE 2N IP INTERCOM

The intercom sends video to the surveillance software. The operator can watch this live, record it and even use it for the purposes of a security audit at a later date.

POP-UP WINDOW

When a call comes in or an alarm is triggered, a window pops up for the operator with video from the IP intercom. This means they know what is going on outside the door and can begin to address the situation immediately.

OPENING THE DOOR

The operator opens the door from the monitoring window of the selected intercom with a single touch of a button.

LISTEN IN

The operator switches on audio monitoring from a selected intercom. This means they hear what is going on outside the door straight away.

PREDEFINED RULES

When adding an intercom to the software, a button for opening the door and calling the intercom is automatically assigned to the intercom. The administrator can also manually create more rules.

AXIS CAMERA STATION ON 2N® INDOOR TOUCH 2.0

MOBILE APPLICATION

AXIS Camera Station software also comes as an application for mobile phones and tablets. You'll find it preinstalled on our 2N® Indoor Touch 2.0 answering unit. Your customers can play a live stream from AXIS cameras or IP intercoms on their answering unit whenever they want.
